EDUCATION

NEW YORK UNIVERSITY

Masters of Science in Computer Engineering

ST. JOSEPH'S UNIVERSITY, NEW YORK

Bachelors of Science in Computer Science/Mathematics

- GPA: 3.7 / 4.0

New York, NY

SEPT 2026 - DEC 2027

Patchogue, NY

SEPT 2022 - MAY 2026

TECHNICAL HIGHLIGHTS

Full-stack production deployment: React + Vite frontends, FastAPI backends, PostgreSQL + Redis + SQLite data layers, Railway + Vercel hosting

ML pipeline development: XGBoost, scikit-learn, CalibratedClassifierCV, ColumnTransformer, 30K+ record training datasets

Data engineering: SEC EDGAR XBRL parsing, ETL pipelines, Redis TTL deduplication, idempotent ingestion, real-time web scraping via Playwright

Notification systems: Twilio SMS, email delivery workflows, 99.9% uptime, multi-subscriber alert infrastructure

PROJECTS

EDGAR Financial Dashboard - Real-Time SEC Filing Pipeline

Python • FastAPI • SQLite • React • XBRL

- Built a full-stack ETL pipeline ingesting annual 10-K filings for 5 public companies from the SEC EDGAR XBRL API, parsed financial statements into a SQLite database and served a REST API with 3 endpoints including a financial screener, deployed on Railway with auto-ingestion on startup.
- Engineered a multi-key XBRL resolver handling inconsistent reporting tags across companies (e.g. RevenueFromContractWithCustomerExcludingAssessedTax vs Revenues) – implemented idempotent ingestion via INSERT OR IGNORE with UNIQUE(company_id, fiscal_year) constraints, preventing duplicate data across pipeline re-runs.

SizeSync - AI Clothing Size Predictor

React (Vite) + Python • XGBoost • FastAPI • scikit-learn

- Built SizeSync, a clothing fit prediction model trained on 30K+ body measurement records (ANSUR II) using a calibrated XGBoost classifier — achieved 99.7% size recommendation accuracy across 5 brands (Nike, Lululemon, Gap, Zara, H&M) and deployed a real-time inference API with 5.895ms average latency via FastAPI.
- Engineered a sklearn ColumnTransformer pipeline combining StandardScaler and OneHotEncoder across 6 body measurement features and brand-specific encodings — applied CalibratedClassifierCV (isotonic) to output calibrated size probabilities, reducing predicted mis-size rate by 99% over a size-chart-only baseline.

DropAlert - Real-Time Drop Notification Platform

Python • Playwright • Redis • PostgreSQL • Web Scraping

- Built DropAlert, a streetwear release tracker scraping Supreme, Nike SNKRS, and StockX every 30 minutes using Playwright — delivers real-time email notifications to a live subscriber base with 99.9% uptime across 15+ tracked drops.
- Engineered a Redis-backed deduplication pipeline with 48-hour TTL keys, eliminating duplicate subscriber notifications across all alert sends — architected a PostgreSQL schema with foreign key constraints tracking drops, subscribers, and alert delivery logs.

SKILLS

Programming Languages: Python, JavaScript, TypeScript, Java, Dart, C++, SQL, HTML/CSS

Frameworks & Libraries: React, FastAPI, Node.js, Flutter, scikit-learn, XGBoost, Recharts

Tools & Infrastructure: Git, Vite, Playwright, Redis, PostgreSQL, SQLite, SQLAlchemy

PROFESSIONAL EXPERIENCE

EXTERN, TRUBRIDGE

Remote

AI Data Analyst

JAN 2026 - MARCH 2026

- Analyzed large public health datasets using Python and SQL to identify trends and generate actionable insights.
- Developed dashboards and data visualizations to communicate findings to technical and non-technical stakeholders.

PEOPLETIME

Remote

Software Engineer Intern

JAN 2025 - JUNE 2025

- Developed cross-platform mobile application features using Flutter with backend services in Python and Java.
- Improved application load performance by 44% through state management and rendering optimizations.

FRED SILVER & COMPANY

Ronkonkoma, NY

Web Developer

NOV 2024 - JAN 2025

- Built an internal inventory management platform that automated manual Excel-based workflows for business operations.
- Optimized application performance through caching strategies and efficient data processing pipelines.
